

Protect and maintain your central heating system

Everything you need to know about MagnaClean®.

Although your central heating system might seem to be working normally, iron oxide deposits may have built up as a result of corrosion. This can cause a loss in efficiency, sludge build-up and cold spots in your radiators. MagnaClean® is a powerful magnetic filter that captures iron oxide particles, resulting in a warmer home, increased efficiency and longevity of your system.

British Gas 

Your energy experts

Q Why is a MagnaClean® right for you?

A Fitting a MagnaClean® will help protect your boiler, radiators and system from iron oxide build-up, enabling your system to run more efficiently.

Q What does the installation of a MagnaClean® involve?

A Your British Gas engineer will drain your system and install a MagnaClean® unit to a section of pipe near your boiler or in your airing cupboard.

Q How long will it take?

A The entire process should take approximately 2 hours.

Q Will I have to move furniture or carpets?

A No, your British Gas engineer will only need access to your boiler or airing cupboard.

Q Can I have a MagnaClean® instead of a PowerFlush™?

A MagnaClean® is not a substitute for a PowerFlush™. Should your British Gas engineer recommend that you invest in a MagnaClean®, he/she will assess whether your system also requires PowerFlush™.

Q How long will a MagnaClean® last?

A The MagnaClean® is designed to provide continuous protection and last for the lifetime of your boiler.

Q Does the MagnaClean® need to be maintained?

A Yes, but you will not be required to do anything yourself as your British Gas engineer will clean the MagnaClean® filter during your Annual Service.

Q Is there a guarantee?

A Every MagnaClean® comes with a 2-year product guarantee.
