See your home in a new light,  
with your new smart meter

## See the energy you use for the first time

With your new smart meter and in-home display, the cost of the energy you use becomes transparent.

You'll be able to see exactly how much it costs to make your toast in the morning, as well as what it costs to keep the heating on all night. Understanding the energy you use helps you make choices to save money in the future.

It's just one of the reasons why we are at the forefront of the industry in shaping the future of energy.

## Watch and **understand** what you're spending

It's easy to forget how the little things you do can cost money as you go about your daily life.

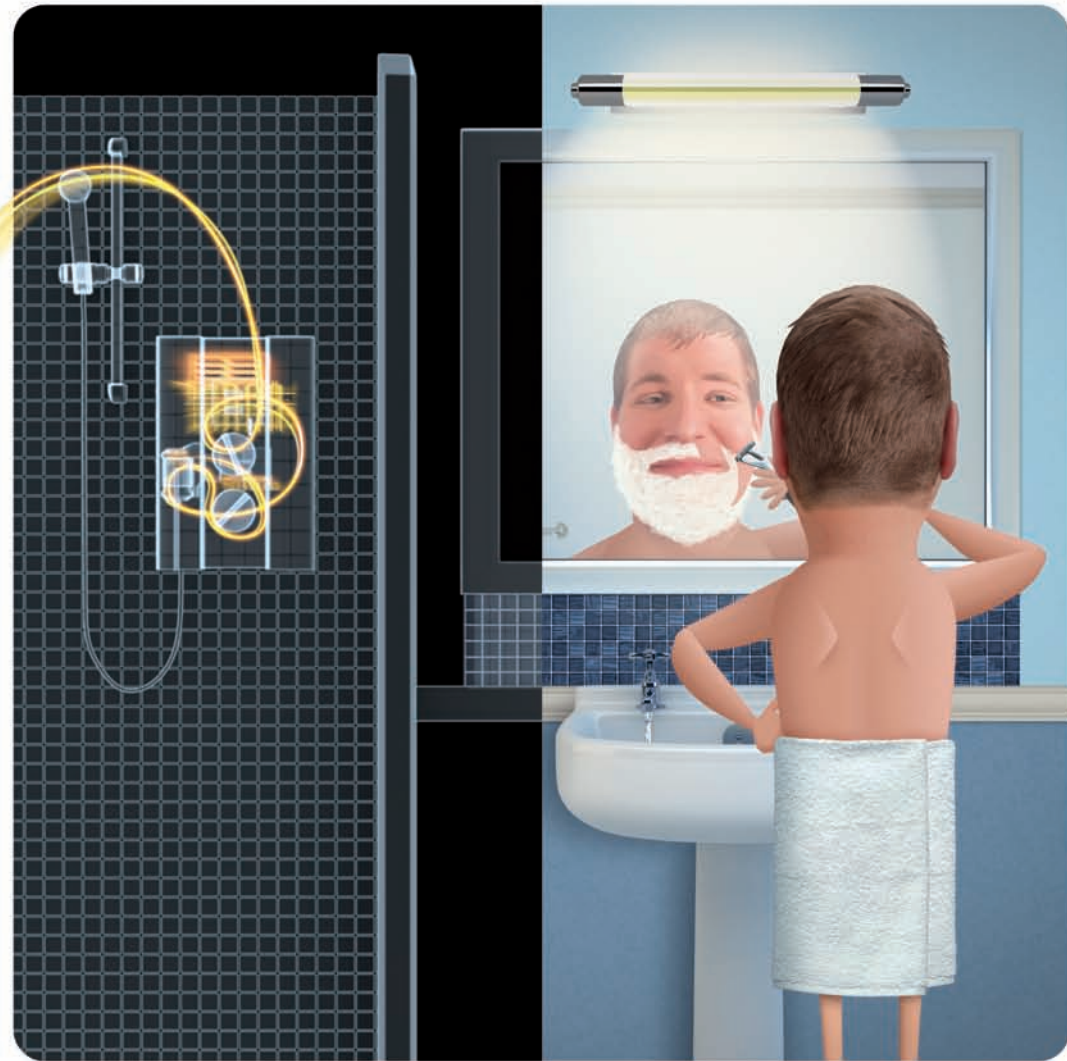

But now, thanks to your in-home display, you'll know whether boiling the kettle for a cup of tea is cheaper or more expensive than charging your mobile phone. Not to mention how much you pay to leave your TV on standby.

# Your in-home display makes it all very simple

We've made it as easy as possible. At a glance traffic lights show you how much energy you're using.

If the display is red, then your home's energy usage is high and you're using more than 4 kilowatt hours (kWh). If it's green, it's low and you're using less than 1 kilowatt hour (kWh). It's really that simple.

Your in-home display will also show you how much your energy costs you in pounds and pence.

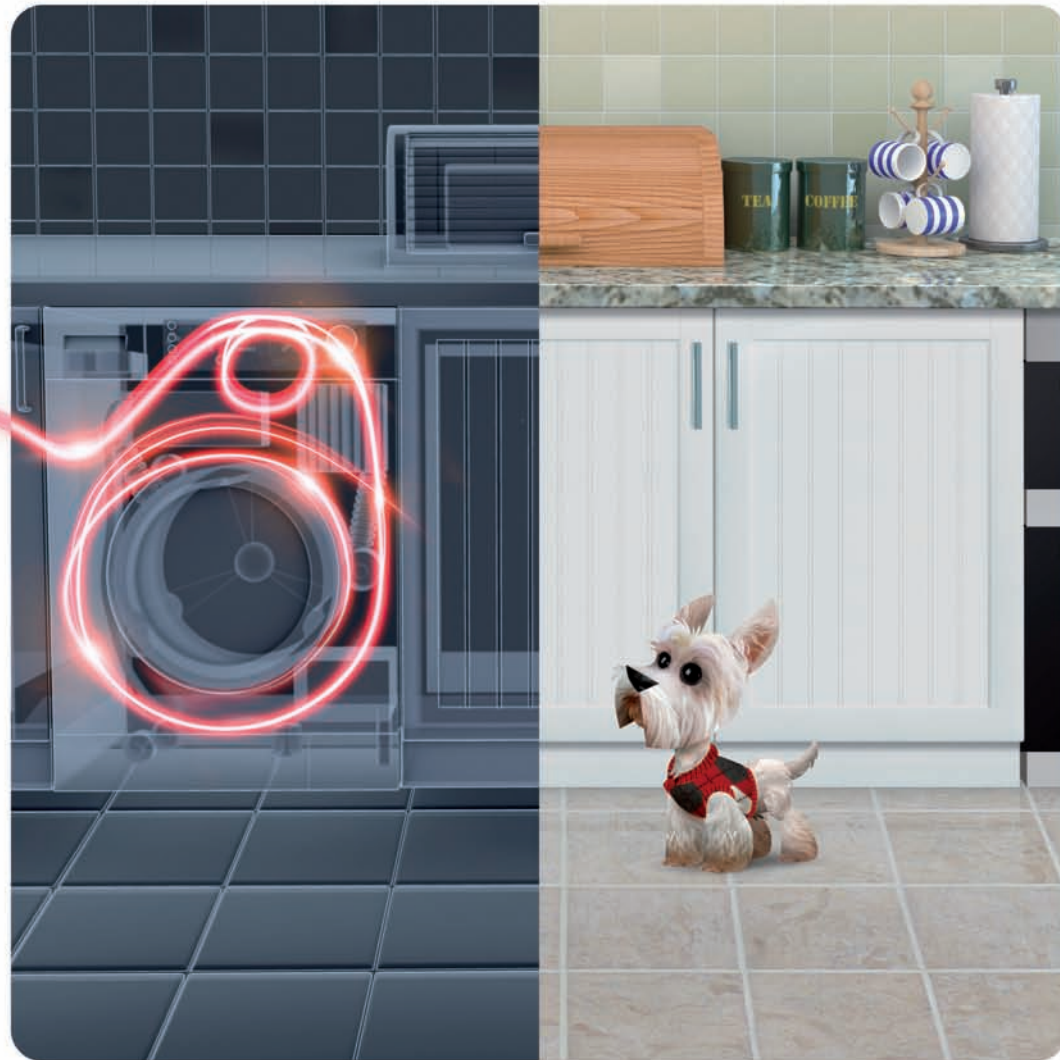

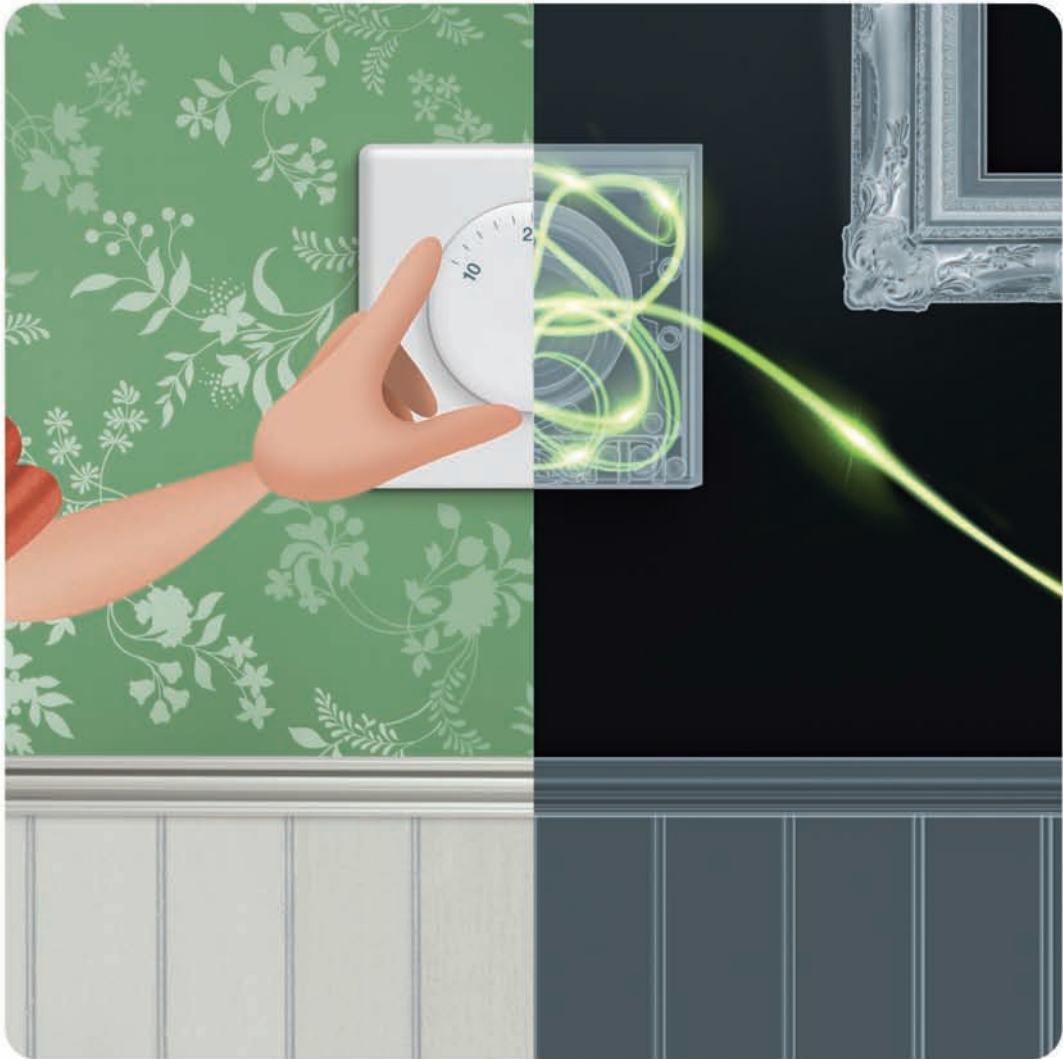

## Giving you more choices

Sometimes we use more energy than we need, but most of the time we don't even know we're doing it. You'll get more choice and control by understanding your energy. It's a lot easier to change a habit when you can see the benefit almost immediately.

For example, just imagine the saving you'll see if you dry your clothes on a washing line instead of using a tumble dryer.

Find out what you can do differently at  
[britishgas.co.uk/energyefficiency](https://www.britishgas.co.uk/energyefficiency)

# More control **better bills**

A few small changes to the way you use your energy could make a big difference to your budget. Just doing simple things like turning your thermostat down a couple of degrees could really help. With your new smart meters and in-home display, you could **save up to 10% on your energy bills\***

And that's not all. You'll get accurate bills without submitting a meter reading as your smart meter will send us regular and accurate readings of your energy usage automatically.

**So why not get smarter with your energy today and really see the difference?**
